

Mediflex Announces Enhanced Device for Bariatrics

June 11, 2010. Islandia New York.

Mediflex Surgical Products has announced an enhancement to its **StrongArm™ Surgical Holder and Positioner**. Effective immediately the Top Mount StrongArm Device will have a vertical post that has been lengthened by 6 1/4".

"We have had numerous requests for custom lengths for this device," said Al Fischer, North American Sales Manager at Mediflex. "This product is widely used in Bariatrics, particularly for holding Nathanson Hooks," he added. "Since the post is height adjustable, there is no downside to this and it should make liver retraction easier in many Bariatric Procedures. Additional information is available from our Local Distributors or from www.mediflex.com."

Mediflex is a Division of Flexbar Machine Corp and has specialized in designing, developing and manufacturing unique surgical devices for over 40 years. Their product lines include Bookler® Table Mounted Retractor Systems, Mini-Bookler® Table Mounted Retractor Systems, Davida™ Neurosurgical Retractor Systems, Flex Arm™ Surgical Holders and Positioners, StrongArm™ Surgical Holders and Positioners and the Cutting Edge™ System of Disposable Laparoscopic Instrument Tips.
