

FOR IMMEDIATE RELEASE

Mediflex® releases clinical video featuring latest FlexArm™ Plus System for maximum surgical efficiency, versatility and flexibility

ISLANDIA, New York (June 20, 2016) - Mediflex is proud to release a clinical video featuring the FlexArm Plus System in Upper GI Laparoscopy. The surgical footage validates the efficiency, versatility and flexibility of the FlexArm Plus in laparoscopic surgery.

Recent advancements in the FlexArm Plus technology include greater holding strength for stabilization of endoscopes, retractors and instruments. Additional enhancements provide easier and quicker set-up and cleaning as well as an increased durability for extended product life.

The video showcases the use of a twin FlexArm Plus System which creates a controlled surgical environment while reducing the number of needed assistants. Use of the FlexArm to hold the laparoscope provides a static image for better visualization, particularly during longer cases. Less scope cleanings are required when compared to an assistant scope holder. The second FlexArm is used for organ retraction which results in both optimal surgical field management as well as reduced trauma as the retraction is consistent and controlled. The FlexArm Plus System offers versatility for the array of instruments and procedures it can accommodate in addition to the intra-operative flexibility of unlimited positioning options.

“We are pleased to have validation that the FlexArm Plus technology offers such substantial benefits in laparoscopic surgery which results in quicker and safer surgery for the patient, a controlled environment for the surgeon as well as cost-savings for the hospital”, said Mediflex President Jonathan Adler.

About Mediflex

For 50 years, Mediflex Surgical Products, a division of Flexbar Machine Corp. has specialized in the design, development and production of surgical holders, positioning arms, retractor systems and minimally invasive devices. Mediflex continues to retain an industry-leading position with the FlexArm™ and StrongArm™ surgical holding arms, Booker® and Nathanson retractor systems, Cutting Edge™ disposable tip laparoscopic instruments and Laparo-Flex™ self-forming articulating retractor brands. Mediflex continues to expand its product portfolio to include innovative, time-saving, cost-effective devices for enhanced patient outcomes.
